This special issue of Distributed Computing is based on papers that originally appeared as extended abstracts in the Proceedings of the 33rd Symposium on Principles of distributed computing (DISC 2019), held in Budapest, Hungary.

The special issue also includes one paper originally invited to the special issue of PODC 2019; it appears separately due to publication delays.

The papers for the Special Issue were chosen by the respective Program Committees from the regular papers presented at the symposium, based on their quality and rep-

resentation of the spectrum of topics encompassed by the Symposium. In addition to being reviewed, in preliminary form, by the Program Committee, the full papers submitted for the Special Issue were refereed according to the standard practices of Distributed Computing.

We thank the program committees, the handling editors, the referees and the authors of these papers.
