## Preface

Peer-to-peer (P2P) computing is attracting enormous media attention. Typical applications are file sharing, as in Gnutella, and exploiting distributed computing power, as in the SETI (Search for Extra Terrestrial Intelligence) project.

The most popular applications at present are limited in their scope, but they are highlighting some of the key challenges of P2P computing and exposing the limitations of traditional approaches to addressing such challenges. First, the peers are autonomous entities: they can cooperatively participate or not according to their own choice. Second, the peers are heterogeneous, meaning that in general we would not be justified in making strong assumptions about how they are designed or how their information structures are conceptually modeled.

The applications of P2P computing go beyond file sharing or load balancing of computing resources. Understood more generally, P2P computing is a natural approach to the development of large systems from autonomous, heterogeneous components. The obvious idea would be for entities to function as peers that provide services or expose resources for sharing. Services or resources can then be composed dynamically to yield novel functionalities. Rigorous composition techniques are a major research direction.

First, let's consider heterogeneity. One aspect of the above-mentioned techniques for developing P2P systems is dealing with the information structures of the various peers. Another aspect is dealing with the underlying processes. How do we ensure that peers are able to share knowledge and able to act in unison? Addressing both aspects involves modeling the peers appropriately and reconciling their conceptual differences.

Next, let's consider autonomy. Since the participants are autonomous and not governed by any central agency, certain new challenges must be addressed. One, we need mechanisms for trust and reputation, and, related to these, for governance and regulation. Two, we need to develop economic environments or incentive mechanisms that foster knowledge sharing and collaboration, i.e., lead the peers to prefer cooperative over non-cooperative behaviors in sharing resources. Systems such as Gnutella already suffer from the problem of *free riding*, where some participants take advantage of the system but never contribute to it. What business models would properly support those who contribute or give an incentive to the peers to cooperate? What techniques would sustain such business models?

Interestingly and significantly, research on multiagent systems and on large-scale information systems has at least partially addressed many of the challenges of P2P systems. The work on information systems has studied the consequences of heterogeneity of knowledge and process. The work on multiagent systems has studied the consequences of autonomy. In particular, the basic doctrine of multiagent systems—that the member agents are autonomous—agrees with what P2P systems require. Research on topics such as task decomposition, protocols,

economic models involving game theory and decision theory, and coordination and teamwork all feed naturally into P2P systems.

For the above reasons, this workshop series aims at addressing the following nonexhaustive list of topics:

- Intelligent agent techniques for P2P computing
- P2P computing techniques for multi-agent systems
- The Semantic Web and semantic coordination mechanisms for P2P systems
- Scalability, coordination, robustness and adaptability in P2P systems
- Self-organization and emergent behavior in P2P systems
- E-commerce and P2P computing
- Participation and contract incentive mechanisms in P2P systems
- Computational models of trust and reputation
- Community of interest building and regulation, and behavioral norms
- Intellectual property rights in P2P systems
- P2P architectures
- Scalable data structures for P2P systems
- Services in P2P systems, including service definition, discovery, filtering, composition, and so on
- Knowledge discovery and P2P data mining
- P2P-oriented information systems
- Information ecosystems and P2P systems
- Security considerations in P2P networks
- Ad hoc networks and pervasive computing based on P2P architectures and wireless communication devices.

The workshop series emphasizes discussions about methodologies, models, algorithms and technologies, strengthening the connection between agents and P2P computing. These objectives are accomplished by bringing together researchers and contributions from these two disciplines but also from more traditional areas such as distributed systems, networks, and databases.

This volume is the postproceedings of AP2PC 2003, the 2nd International Workshop on Agents and P2P Computing,<sup>1</sup> which took place in Melbourne on July 14, 2003 in the context of the 2nd International Joint Conference on Autonomous Agents and Multi-agent Systems (AAMAS 2003).

This volume is organized according to the sessions held at the workshop. Besides the invited papers related to the invited talk and to the panel, these were framed into the following topics:

- Paradigm integration and challenges
- Trust
- Self-organization
- Incentives
- Search and systems
- Adaptive applications

– Mobile agents

This proceedings brings together papers presented at the workshop, fully revised to incorporate reviewers' comments and discussions at the workshop, plus three invited papers related to the panel. After the call for papers we received 22 submissions. All submissions were reviewed for scope and quality; finally, 11 were accepted as full papers and 6 as short papers. AP2PC 2003 drew over 40 attendees. Given the dual threats of SARS and war this year and logistical challenges of getting to Melbourne, it is not surprising that this was one of the better attended workshops at AAMAS.

We express our deepest appreciation to the participants for their lively discussions. We would like to acknowledge the contributions of the invited speaker, the authors for their excellent submissions, and the program committee members for their diligence in reviewing submissions on a tight schedule. We would also like to thank the panel chair, Aris M. Ouksel, and the invited panelists, Sonia Bergamaschi (University of Modena and Reggio-Emilia), Rajkumar Buyya (University of Melbourne), and Onn Shehory (IBM Haifa). We would like to acknowledge the steering committee for its guidance and encouragement.

This workshop followed the successful first edition, which was held in conjunction with AAMAS in Bologna in 2002. In recognition of the interdisciplinary nature of P2P computing, a sister event called the International Workshop on Databases, Information Systems, and P2P Computing was held in Berlin in September 2003 in conjunction with the International Conference on Very Large Data Bases (VLDB).

# Executive Committee

## Organizers

*Program Co-chairs*      Gianluca Moro  
Dept. of Electronics, Computer Science and Systems,  
University of Bologna, Italy

Claudio Sartori  
IEIIT-BO-CNR, University of Bologna, Italy

Munindar P. Singh  
Dept. of Computer Science,  
North Carolina State University, USA

*Panel Chair*              Aris M. Ouksel  
Dept. of Information and Decision Sciences,  
University of Illinois at Chicago, USA

## Steering Committee

The steering committee consists of the above plus the following people:

Karl Aberer, EPFL, Lausanne, Switzerland

Sonia Bergamaschi, Dept. of Science Engineering,  
University of Modena and Reggio-Emilia, Italy

Manolis Koubarakis, Dept. of Electronic and Computer Engineering,  
Technical University of Crete

Paul Marrow, Intelligent Systems Laboratory,  
BTexact Technologies, UK

## Program Committee

Karl Aberer, EPFL, Lausanne, Switzerland  
Sonia Bergamaschi, University of Modena and Reggio-Emilia, Italy  
M. Brian Blake, Georgetown University, USA  
Rajkumar Buyya, University of Melbourne, Australia  
Ooi Beng Chin, National University of Singapore, Singapore

Paolo Ciancarini, University of Bologna, Italy  
 Costas Courcoubetis, Athens University of Economics and Business, Greece  
 Yogesh Deshpande, University of Western Sydney, Australia  
 Asuman Dogac, Middle East Technical University, Turkey  
 Boi V. Faltings, EPFL, Lausanne, Switzerland  
 Maria Gini, University of Minnesota, USA  
 Chihab Hanachi, University of Toulouse, France  
 Mark Klein, Massachusetts Institute of Technology, USA  
 Matthias Klusch, DFKI, Saarbruecken, Germany  
 Yannis Labrou, PowerMarket Inc., USA  
 Tan Kian Lee, National University of Singapore, Singapore  
 Dejan Milojicic, Hewlett-Packard Labs, USA  
 Alberto Montresor, University of Bologna, Italy  
 Luc Moreau, University of Southampton, UK  
 Jean-Henry Morin, University of Geneva, Switzerland  
 John Mylopoulos, University of Toronto, Canada  
 Andrea Omicini, University of Bologna, Italy  
 Maria Orlowska, University of Queensland, Australia  
 Aris M. Ouksel, University of Illinois at Chicago, USA  
 Mike Papazoglou, Tilburg University, Netherlands  
 Terry R. Payne, University of Southampton, UK  
 Paolo Petta, Austrian Research Institute for AI, Austria  
 Jeremy Pitt, Imperial College London, UK  
 Dimitris Plexousakis, Institute of Computer Science, FORTH, Greece  
 Martin Purvis, University of Otago, New Zealand  
 Omer F. Rana, Cardiff University, UK  
 Katia Sycara, Robotics Institute, Carnegie Mellon University, USA  
 Douglas S. Reeves, North Carolina State University, USA  
 Thomas Risse, Fraunhofer IPSI, Darmstadt, Germany  
 Pierangela Samarati, University of Milan, Italy  
 Christophe Silbertin-Blanc, University of Toulouse, France  
 Maarten van Steen, Vrije Universiteit, Netherlands  
 Markus Stumptner, University of South Australia, Australia  
 Peter Triantafyllou, Technical University of Crete, Greece  
 Anand Tripathi, University of Minnesota, USA  
 Vijay K. Vaishnavi, Georgia State University, USA  
 Francisco Valverde-Albacete, Universidad Carlos III de Madrid, Spain  
 Maurizio Vincini, University of Modena and Reggio-Emilia, Italy  
 Fang Wang, BTextact Technologies, UK  
 Gerhard Weiss, Technische Universitaet Muenchen, Germany  
 Bin Yu, North Carolina State University, USA

## Sponsors

This workshop would not have been possible without the generous support from our sponsors, UNI.TU.RIM S.p.A., Fondazione Cassa di Risparmio di Rimini, and Microsoft. To these we express our gratitude.

# Table of Contents

## Paradigm Integration and Challenges

Information Acquisition Through an Integrated Paradigm: Agent + Peer-to-Peer . . . . .	1
<i>Beng Chin Ooi, Wee Siong Ng, Kian-Lee Tan, AoYing Zhou</i>	
Robustness Challenges in Peer-to-Peer Agent Systems . . . . .	13
<i>Onn Shehory</i>	

## Trust

Bayesian Network Trust Model in Peer-to-Peer Networks . . . . .	23
<i>Yao Wang, Julita Vassileva</i>	
Agent-Based Social Assessment of Shared Resources . . . . .	35
<i>Matthias Nickles, Gerhard Weiß</i>	
A Passport-Like Service over an Agent-Based Peer-to-Peer Network . . . . .	41
<i>Shi-Cha Cha, Yuh-Jzer Joung, Yu-En Lue</i>	

## Self-Organization

A Robust and Scalable Peer-to-Peer Gossiping Protocol . . . . .	47
<i>Spyros Voulgaris, Márk Jelasity, Maarten van Steen</i>	
Group Formation Among Peer-to-Peer Agents: Learning Group Characteristics . . . . .	59
<i>Elth Ogston, Benno Overeinder, Maarten van Steen, Frances Brazier</i>	
A Pheromone-Based Coordination Mechanism Applied in Peer-to-Peer . . .	71
<i>Kurt Schelfhout, Tom Holvoet</i>	

## Incentives

Incentive Mechanisms for Peer-to-Peer Systems . . . . .	77
<i>Bin Yu, Munindar P. Singh</i>	
A Taxonomy of Incentive Patterns – The Design Space of Incentives for Cooperation . . . . .	89
<i>Philipp Obreiter, Jens Nimis</i>	

## Search and Systems

P2P MetaData Search Layers . . . . .	101
<i>Sam Joseph</i>	
A Peer-to-Peer Information System for the Semantic Web . . . . .	113
<i>Sonia Bergamaschi, Francesco Guerra, Maurizio Vincini</i>	
G-Grid: A Class of Scalable and Self-Organizing Data Structures for Multi-dimensional Querying and Content Routing in P2P Networks . . . . .	123
<i>Aris M. Ouksel, Gianluca Moro</i>	
Fuzzy Cost Modeling for Peer-to-Peer Systems . . . . .	138
<i>Bo Ling, Wee Siong Ng, YanFeng Shu, AoYing Zhou</i>	
A P2P Approach to ClassLoading in Java . . . . .	144
<i>Daryl Parker, David Cleary</i>	

## Adaptive Applications

Multi-agent Interaction Technology for Peer-to-Peer Computing in Electronic Trading Environments . . . . .	150
<i>Martin Purvis, Mariusz Nowostawski, Stephen Cranefield, Marcos Oliveira</i>	
Location-Based and Content-Based Information Access in Mobile Peer-to-Peer Computing: The TOTA Approach . . . . .	162
<i>Marco Mamei, Franco Zambonelli</i>	
K-Trek: A Peer-to-Peer Approach to Distribute Knowledge in Large Environments . . . . .	174
<i>Paolo Busetta, Paolo Bouquet, Giordano Adami, Matteo Bonifacio, Francesco Palmieri</i>	

## Mobile Agents

Improving Peer-to-Peer Resource Discovery Using Mobile Agent Based Referrals . . . . .	186
<i>Prithviraj(Raj) Dasgupta</i>	
Mobile Agents for Locating Documents in Ad Hoc Networks . . . . .	198
<i>Khaled Nagi, Iman Elghandour, Birgitta König-Ries</i>	

<b>Author Index</b> . . . . .	205
