# Preface

The key challenge for future computer system is dealing with complexity. On one hand this involves internal system complexity which has increased exponentially over recent years. Here the main objectives are to maintain system reliability and to keep the design and maintenance effort manageable, while at the same time continuing to provide new functionality and increasing system performance. This has been the focus of so-called autonomous computing, which aims to bring self-configuration and repair to a wide range of computing systems.

On the other hand future computer systems are more and more becoming integrated into the fabric of everyday life and thus have to deal with the complexities of the real world. They will become smaller, more appropriate for their use, integrated into everyday objects, and often virtually or physically invisible to the users. They will also be deployed in a much higher quantity and penetrate many more application areas than traditional notions of computer systems. This requires computer systems to be adaptable within a much wider range of possible tasks, subjected to much harsher conditions.

To provide such features and functionality, computer devices will become tinier yet still increase in system complexity; they must consume less power, while still supporting advanced computation and communications, such that they are highly connected yet still operate as autonomous units. Pervasive and ubiquitous computing research addresses such issues by developing concepts and technology for interweaving computers into our everyday life. The principal approach is to enhance system functionality and adaptability by recognizing context and situations in the environment.

Organic computing deals with high system complexity by drawing analogies from complex biological systems, with the human-centered goal of self-organization. It addresses both internal system complexity of conventional systems and the complexity involved in pervasive environments dealing with the real world. Thus organic computing investigates the design and implementation of self-managing systems that are self-configuring, self-optimizing, self-healing, self-protecting, context aware, and anticipatory. It touches upon a number of exciting research topics including ultra-low power consumption, scalability and complexity of devices and systems, self-awareness, adaptive networking, and smart behavior of systems.

Many papers submitted to the Architecture of Computing Systems Conference (ARCS) address these aspects of adaptable, self-organizing systems. For computer system hardware, reconfigurable hardware allows us to optimize the system performance based on the application context, relieving software developers from detailed consideration of the inherently inflexible hardware constraints. Adaptive methods for managing resources and tasks enable (embedded) micro-processor systems to be both real-time aware but also very low in their power consumption. In software, middleware agents are able to cope with changes in

application and environment, thus still providing a minimum of functionality even under difficult and changing conditions.

Adaptive ad hoc communication networks and context-aware pervasive systems and applications provide the functionality mostly visible to the end user of such systems. To achieve this extent of adaptivity a large variety of methods were used – many of them borrowed from nature. The papers in this book present a good profile of such novel methods and their application in the area of computing systems.

This year the ARCS conference selected 18 papers from a competitive field of 52 submissions from 12 countries. All papers accepted for presentation were peer reviewed and discussed in the first step in an online discussion among members of the international Program Committee. In the PC Meeting then the final decisions were made based on these reviews and the online discussions. Care was taken to avoid any conflict of interest by handing out papers and discussion papers only to PC members not involved in or related to the work.

We would like to take the opportunity to thank the numerous people who supported us in organizing the paper program and the conference: the Program Committee members for their efforts in reviewing many papers; Uwe Brinkschulte for supporting us by serving as the Workshops and Tutorials Chair; and the General and Program Chairs, Christian Müller-Schloer and Theo Ungerer, for sharing their experience with us and helping us to organize the paper program and the conference.

We extend our gratitude to several organizations that provided financial and organizational support for the ARCS conference. Volker Schanz from the ITG provided the legal framework and the ARCS Fachausschuss, the organizational body of the conference. Financial and organizational support came from the APS+PC group, which organized and funded a special session with several interesting invited talks. Donations also came from our benefactor, Siemens AG. We would also like to thank Christian Decker and Michael Biebl for their help during the electronic submission process, and the University for Health Sciences, Medical Information and Technology in Innsbruck, Austria for hosting the conference.

January 2005

Michael Beigl  
Program Chair ARCS 2005

Paul Lukowicz  
General Chair ARCS 2005

## Executive Committee

Conference Chair:	Paul Lukowicz	University for Health Sciences, Medical Informatics and Technology, Austria
Program Chair:	Michael Beigl	University of Karlsruhe, Germany
Workshops and Tutorials Chair:	Uwe Brinkschulte	University of Karlsruhe, Germany

## Program Committee

Shigeru Ando	University of Tokyo, Japan
Nader Bagherzadeh	University of California, Irvine, USA
Frank Bellosa	University of Erlangen, Germany
Uwe Brinkschulte	University of Karlsruhe, Germany
Roy Campbell	University of Illinois at Urbana-Champaign, USA
Alois Ferscha	University of Linz, Austria
Paul Havinga	University of Twente, Netherlands
Wolfgang Karl	University of Karlsruhe, Germany
Jürgen Kleinöder	Universität Erlangen-Nürnberg, Germany
Rudolf Kober	Siemens AG, München, Germany
Spyros Lalis	University of Thessaly, Greece
Erik Maehle	Universität zu Lübeck, Germany
Christian Müller-Schloer	University of Hannover, Germany
Joe Paradiso	MIT Media Laboratory, USA
Burghardt Schallenger	Siemens AG, Germany
Hartmut Schmeck	University of Karlsruhe, Germany
Albrecht Schmidt	LMU Munich, Germany
Karsten Schwan	Georgia Institute of Technology, USA
Rainer G. Spallek	Technische Universität Dresden, Germany
Peter Steenkiste	Carnegie Mellon University, USA
Yoshito Tobe	Tokyo Denki University, Japan
Hide Tokuda	Keio University, Japan
Theo Ungerer	University of Augsburg, Germany
Klaus Waldschmidt	University of Frankfurt, Germany
Lars Wolf	University of Braunschweig, Germany
Martina Zitterbart	University of Karlsruhe, Germany

## Organization

The Architecture of Computing Systems (ARCS) Conference was organized by the ITG (Informationstechnische Gesellschaft – Information Technology Society) and the Special Interest Group on Computer and Systems Architecture of the GI (Gesellschaft für Informatik – German Informatics Society), supported by OCG (Austrian Computer Society), OVE/GIT (Austrian Electrotechnical Association) and electrosuisse (ITG), and held in cooperation with ACM.

## Sponsor

Siemens AG, Munich, Germany

# Table of Contents

## Adaptation, Power Consumption and Scheduling

Energy Management for Embedded Multithreaded Processors with Integrated EDF Scheduling . . . . .	1
<i>Sascha Uhrig and Theo Ungerer</i>	
Reducing System Level Power Consumption for Mobile and Embedded Platforms . . . . .	18
<i>Ripal Nathuji and Karsten Schwan</i>	
Implementing Control Algorithms Within a Multithreaded Java Microcontroller . . . . .	33
<i>Uwe Brinkschulte and Mathias Pacher</i>	
Adaptivity for Quality and Timeliness Flexible Real-Time Systems . . . . .	50
<i>Thomas Schwarzfischer</i>	

## Adaptation and Agents

Apricot Agent Platform for User-Friendly Mobile Service Development . . . .	65
<i>Petteri Alahuhta, Henri Löthman, Heli Helaakoski, Arto Koskela, and Juha Rönning</i>	
Support of Reflective Mobile Agents in a Smart Office Environment . . . . .	79
<i>Faruk Bagci, Holger Schick, Jan Petzold, Wolfgang Trumler, and Theo Ungerer</i>	
Learning Action Sequences Through Imitation in Behavior Based Architectures . . . . .	93
<i>Willi Richert, Bernd Kleinjohann, and Lisa Kleinjohann</i>	

## Adaptation and Services

Self-healing Execution of Business Processes Based on a Peer-to-Peer Service Architecture . . . . .	108
<i>Thomas Frieese, Jörg P. Müller, and Bernd Freisleben</i>	
Runtime Adaptation of Applications Through Dynamic Recomposition of Components . . . . .	124
<i>Arun Mukhija and Martin Glinz</i>	
An Observer/Controller Architecture for Adaptive Reconfigurable Stacks . .	139
<i>Thorsten Schöler and Christian Müller-Schloer</i>	

## Application Adaptable Systems

The Organic Features of the AMIDAR Class of Processors .....	154
<i>Stephan Gatzka and Christian Hochberger</i>	
Reusable Design of Inter-chip Communication Interfaces for Next Generation of Adaptive Computing Systems .....	167
<i>Vincent Kotzsch, Jörg Schneider, and Günther Döring</i>	
DESCOMP: A New Design Space Exploration Approach .....	178
<i>Mario Schölzel and Peter Bachmann</i>	
Design Space Navigation for Neighboring Power-Performance Efficient Microprocessor Configurations .....	193
<i>Pedro Trancoso</i>	
An Efficient Frequency Scaling Approach for Energy-Aware Embedded Real-Time Systems .....	207
<i>Christian Poellabauer, Tao Zhang, Santosh Pande, and Karsten Schwan</i>	

## Pervasive Computing and Communication

Towards Autonomic Networking Using Overlay Routing Techniques .....	222
<i>Kendy Kutzner, Kurt Cramer, and Thomas Fuhrmann</i>	
Context-Based Storage Management for Wearable and Portable Devices ..	236
<i>Alexandros Karypidis and Spyros Lalis</i>	
A File System for System Programming in Ubiquitous Computing .....	249
<i>Christian Decker, Michael Beigl, and Albert Krohn</i>	
<b>Author Index</b> .....	265
