CONTENT-BASED  
MULTIMEDIA SYSTEMS**

---

# **THE KLUWER INTERNATIONAL SERIES ON INFORMATION RETRIEVAL**

*Series Editor*

**W. Bruce Croft**

*University of Massachusetts, Amherst*

---

***Also in the Series:***

**MULTIMEDIA INFORMATION RETRIEVAL: Content-Based Information Retrieval from Large Text and Audio Databases**, by *Peter Schäuble*; ISBN:0-7923-9899-8

**INFORMATION RETRIEVAL SYSTEMS: Theory and Implementation**, by *Gerald Kowalski*; ISBN: 0-7923-9926-9

**CROSS-LANGUAGE INFORMATION RETRIEVAL**, edited by *Gregory Grefenstette*; ISBN:0-7923-8122-X

**TEXT RETRIEVAL AND FILTERING: Analytic Models of Performance**, by *Robert M. Losee*; ISBN: 0-7923-8177-7

**INFORMATION RETRIEVAL: UNCERTAINTY AND LOGICS: Advanced Models for the Representation and Retrieval of Information**, by *Fabio Crestani, Mounia Lalmas, and Cornelis Joost van Rijsbergen*; ISBN: 0-7923-8302-8

**DOCUMENT COMPUTING: Technologies for Managing Electronic Document Collections**, by *Ross Wilkinson, Timothy Arnold-Moore, Michael Fuller, Ron Sacks-Davis, James Thom, and Justin Zobel*; ISBN: 0-7923-8357-5

**AUTOMATIC INDEXING AND ABSTRACTING OF DOCUMENT TEXTS**, by *Marie-Francine Moens*; ISBN 0-7923-7793-1

**ADVANCES IN INFORMATIONAL RETRIEVAL: Recent Research from the Center for Intelligent Information Retrieval**, by *W. Bruce Croft*; ISBN 0-7923-7812-1

**INFORMATION RETRIEVAL SYSTEMS: Theory and Implementation, Second Edition**, by *Gerald J. Kowalski and Mark T. Maybury*; ISBN: 0-7923-7924-1

# Contents

<b>Preface</b>	<b>xiii</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Technical Issues . . . . .	2
1.1.1 Inter-operability . . . . .	2
1.1.2 Automatic or semi-automatic indexing . . . . .	3
1.1.3 Fool-proof retrieval methods . . . . .	3
1.2 Content-Based Retrieval . . . . .	4
1.2.1 Basic idea . . . . .	4
1.2.2 Existing work . . . . .	4
1.3 Challenges and solutions . . . . .	10
1.4 Layout of the Book . . . . .	12
References . . . . .	12
<b>2 Formalism of Content-based Multimedia Systems</b>	<b>15</b>
2.1 The System Must be User-centered . . . . .	15
2.1.1 Man-machine interaction must be extremely friendly . . . . .	15
2.1.2 Reduce the work and information overload of users . . . . .	15
2.2 Content-based Multimedia Information System . . . . .	16
2.2.1 Definitions . . . . .	17
2.2.2 Challenges in content-based retrieval . . . . .	21
2.2.3 Representation of multimedia objects . . . . .	23
2.2.4 Multimedia data analysis . . . . .	24
2.3 Object Recall - A New Formalism for Content-Based Retrieval . . . . .	26
2.3.1 Need for formalism of content-based retrieval . . . . .	26
2.3.2 Contrast to pattern classification . . . . .	28
2.3.3 Formalism for content-based navigation . . . . .	30
2.3.4 Formalism for content-based retrieval by adaptive fuzzy concept . . . . .	31

2.4	A Content-Based Similarity Retrieval Formalism . . . . .	33
2.4.1	Feature measures and similarity functions . . . . .	33
2.4.2	Training data set and loss function . . . . .	34
2.5	Learning of Similarity Function . . . . .	35
2.5.1	Problem statement . . . . .	35
2.5.2	Related works . . . . .	36
2.5.3	Learning of simple similarity functions . . . . .	37
2.5.4	Learning of multi-level similarity functions . . . . .	38
2.6	Experimental Results . . . . .	41
2.6.1	The data set . . . . .	41
2.6.2	Feature extraction . . . . .	41
2.6.3	Within-sequence learning . . . . .	43
2.6.4	Across-sequence learning . . . . .	44
2.7	Conclusions . . . . .	47
	References . . . . .	47
<b>3</b>	<b>Color Feature Extraction</b>	<b>49</b>
3.1	Color Spaces Selection . . . . .	49
3.1.1	<i>RGB</i> color space . . . . .	49
3.1.2	Munsell color system . . . . .	50
3.1.3	CIE color systems . . . . .	50
3.1.4	HSV color space . . . . .	51
3.2	Color Measures . . . . .	52
3.2.1	A brief review of color features . . . . .	53
3.2.2	The distance method . . . . .	55
3.3	Reference Color Table Method . . . . .	56
3.3.1	The color clustering-based method . . . . .	58
3.3.2	Experimental results . . . . .	64
3.3.3	Remarks . . . . .	65
	References . . . . .	66
<b>4</b>	<b>Texture Feature Extraction</b>	<b>69</b>
4.1	Discrete Cosine Transformed Texture . . . . .	70
4.1.1	Discrete cosine transform . . . . .	70
4.1.2	Texture feature based on discrete cosine transform	71
4.1.3	Feature vector formation . . . . .	72
4.1.4	Test results . . . . .	72
4.2	Wavelet Transformed Texture Feature . . . . .	74
4.2.1	Wavelet Transform . . . . .	74
4.2.2	Feature vector formation . . . . .	75
4.2.3	Performance evaluation and test results . . . . .	79

4.3	Texture Features Based on Second Moment Matrix . . . . .	82
4.3.1	Performance evaluation and test results . . . . .	83
4.4	Comparative Study . . . . .	84
4.4.1	Comparison based on classification . . . . .	84
4.4.2	Multiple features - combination of color and texture	84
4.4.3	Retrieval test . . . . .	87
	References . . . . .	90
<b>5</b>	<b>Video Processing</b>	<b>93</b>
5.1	Review of Video Processing Techniques . . . . .	94
5.1.1	Video features . . . . .	94
5.1.2	Video applications . . . . .	95
5.1.3	Research areas . . . . .	96
5.1.4	State of the art review . . . . .	97
5.2	Content-Based Representative Frame Extraction and Video Summary . . . . .	100
5.2.1	Definition . . . . .	100
5.2.2	Related work . . . . .	101
5.2.3	Extraction of representative frames . . . . .	102
5.2.4	Application of representative frame extraction technique . . . . .	114
	References . . . . .	117
<b>6</b>	<b>Object Segmentation</b>	<b>121</b>
6.1	Edge-preserved smoothing of features . . . . .	123
6.1.1	Principle of edge-preserved smoothing . . . . .	123
6.1.2	EPSM for 2D signal . . . . .	127
6.1.3	Application in color feature . . . . .	128
6.1.4	Application in texture feature . . . . .	129
6.2	Segmentation algorithm: clustering and region merging . . . . .	134
6.2.1	Clustering in the feature space . . . . .	135
6.2.2	Cluster validation for unsupervised segmentation . . . . .	138
6.2.3	Markov random field model and Gibbs distribution	145
6.2.4	Region analysis and region merging . . . . .	152
6.3	Experiment results . . . . .	156
6.3.1	Experiment setup . . . . .	156
6.3.2	Experiment results . . . . .	157
6.3.3	Summary . . . . .	169
	References . . . . .	170
<b>7</b>	<b>Human Face Detection</b>	<b>173</b>

<b>7.1</b>	Color Segmentation of Faces . . . . .	174
7.1.1	Chromaticity diagrams . . . . .	176
7.1.2	Effects of the projection of 3-D color spaces on chromaticity diagrams . . . . .	180
7.1.3	Method for face detection using chromaticity diagrams . . . . .	184
7.1.4	Experiments . . . . .	185
<b>7.2</b>	Shape Information As a Cue . . . . .	188
7.2.1	Geometric characteristic of face . . . . .	188
7.2.2	Shape descriptors . . . . .	190
7.2.3	Experimental results . . . . .	191
<b>7.3</b>	Face Feature Detection Using DOG Operators . . . . .	191
7.3.1	The DOG (Difference of Gaussians) operator . . . . .	191
7.3.2	Face feature detection by DOG operator . . . . .	193
7.3.3	Experimental results . . . . .	194
7.3.4	Discussion . . . . .	196
<b>7.4</b>	Template-based Human Face Detection . . . . .	198
7.4.1	Overview . . . . .	198
7.4.2	Normalized “face space” . . . . .	199
7.4.3	Dimensionality reduction . . . . .	199
7.4.4	Clustering and face template generation . . . . .	200
7.4.5	Template matching . . . . .	203
	References . . . . .	206
<b>8</b>	<b>Visual Keywords</b>	<b>209</b>
8.1	Introduction . . . . .	209
8.2	Related Works . . . . .	212
8.3	Methodology . . . . .	214
8.3.1	Typification . . . . .	215
8.3.2	Description scheme . . . . .	219
8.3.3	Selection . . . . .	222
8.3.4	Coding scheme . . . . .	222
8.4	Image Retrieval . . . . .	223
8.4.1	Unsupervised learning . . . . .	224
8.4.2	Learning by instruction . . . . .	228
8.5	Image Categorization . . . . .	234
8.6	Conclusions and Future Directions . . . . .	236
	References . . . . .	237
<b>9</b>	<b>Fuzzy Retrieval</b>	<b>239</b>
9.1	Problem Definition . . . . .	240

9.1.1	Content-based fuzzy retrieval . . . . .	240
9.1.2	Fuzzy sets over multi-dimensional universes . . . . .	242
9.1.3	Fuzzy queries cannot be processed in the feature space . . . . .	243
9.1.4	Fuzzy querying of multimedia information calls for new technology for its processing . . . . .	244
9.2	Fuzzy Database Model . . . . .	246
9.2.1	Extended tuple relation calculus for image retrieval	249
9.3	Fuzzy Query Processing . . . . .	251
9.3.1	Feature space and fuzzy space . . . . .	251
9.3.2	Fuzzy query interface . . . . .	252
9.3.3	Context model . . . . .	253
9.3.4	Extraction of the confidence value . . . . .	254
9.3.5	Incomplete query condition . . . . .	255
9.3.6	Similarity measure . . . . .	256
9.3.7	Relevance feedback for query refinement . . . . .	258
9.4	Learning Fuzzy Membership Functions . . . . .	258
9.4.1	Need for learning fuzzy membership functions . . . . .	259
9.4.2	A Fuzzy neuro membership function . . . . .	262
9.4.3	Training the neural network . . . . .	263
9.5	Experimental Results of Fuzzy Retrieval . . . . .	264
9.5.1	Face database indexing and retrieval . . . . .	264
9.6	Conclusion and Remarks . . . . .	270

# Preface

Due to the rapid advances in computing and communication technologies, human beings are constantly being inundated by information in form of text, image, audio, video and spatial data. There is an overwhelming need for an integrated multimedia system to reduce the work and information overload for people. The technologies for handling multimedia data are most important and most challenging: our society is increasingly generating vast amount of multimedia data by means of cameras, satellites, etc.; the complexity and variety of multimedia data are beyond one's imagination.

It is quite natural for us human beings to recall multimedia information by content. We recognize our friends by their appearances. The story of one video may remind us of the ones similar to that. Therefore, content-based access to multimedia is of primary importance. This book deals with various aspects of content-based multimedia systems.

Formalization of the whole paradigm of content-based retrieval to bring it to a sufficient level of consistency and integrity is essential to the success of the field. After introduction, we will discuss the formalism of content-based multimedia systems, which is proposed and developed by the authors of the book. With the formalism, a reconfigurable retrieval engine can be developed.

For the content-based retrieval of a large multimedia database, a unified feature space (referred to as vector space in information retrieval community) is desirable. In such a unified feature space, data items can be represented and measures of similarity can defined.

Unlike conventional databases, where primary data types are well handled by standard query languages such as SQL, the retrieval of multimedia databases is approximate, and is not likely able to be handled by a single language like SQL. In the fourth chapter, we will present methods for content-based indexing for visual browsing, fuzzy retrieval method, customizable similarity retrieval, and case-based reasoning.

As show cases, three application examples will be presented. A face database is a typical image database where each data item share the same structure. Many concepts can be demonstrated using this system. Because of the diversity of the trademarks, the retrieval of conflicting trademarks

relies on several properties of those trademarks. These include the word, phonetics, shape and interpretation of the trademark image. The system retrieval engine should be able to find feature spaces to accommodate those properties in order to define proper similarity functions. The medical database example is used to illustrate case-based reasoning. Digital photo album is a very practical application as digital cameras become popular.

This book covers the research results supported by Kent Ridge Digital Labs (KSDL), Singapore and funded by Real World Computing Partnership (RWCP), Japan. The authors sincerely appreciate the support and help given by the management and colleagues from these two organizations.

The following people made contributions to the book: Chian Prong Lam (Chapter 10 and 11), Fuchun Shang (Chapter 4, 7 and 12), Xinding Sun (Chapter 5), Bin Wang (Chapter 6), and Harro Stokman (Chapter 7). We would also like to thank Ms. Anuradha Srinivasan for the proof-reading help.
