# Preface

The 1st Workshop on Service Assurance with Partial and Intermittent Resources (SAPIR 2004) was the first event in a series introducing the concept of pi-resources and bridging it with the emerging and important field of distributed and heavily shared resources.

The topics concerning this event are driven by a paradigm shift occurring in the last decade in telecommunications and networking considering partial and intermittent resources (pi-resources). The Internet, converged networks, delay-tolerant networks, ad hoc networking, GRID-supporting networks, and satellite communications require a management paradigm shift that takes into account the partial and intermittent availability of resources, including infrastructure (networks, computing, and storage) and service components, in distributed and shared environments.

A resource is called partial (p-resource) when only a subset of conditions for it to function to complete specification is met, yet it is still able to provide a (potentially degraded) service, while an intermittent or sporadic resource (i-resource) will be able to provide a service for limited and potentially unpredictable time intervals only. Partial and intermittent services are relevant in environments characterized by high volatility and fluctuation of available resources, such as those experienced in conjunction with component mobility or ad hoc networking, where the notion of traditional service guarantees is no longer applicable. Other characteristics, such as large transmission delays and storage mechanisms during the routing, require a rethinking of today's paradigms with regards to service assurance and how service guarantees are defined.

Several aspects and challenges in defining, deploying, and maintaining partial and intermittent resources that may collocate with traditional resources have been identified. The pi-resources can support new types of applications, and may require semantics, models, and associated management mechanisms. Most of the currently known paradigms may be revisited in the light of pi-resources.

Pi-resources are present in ad hoc, sensor, and overlay networks, as well as in co-operative and adaptive applications. It is estimated that implications in several areas are unavoidable: (i) on current communication protocols, security, and middleware, (ii) on QoS, and traffic modeling, (iii) on the architecture of network devices and networks, and (iv) in intermittent GRID services and architectures.

Other well-known mechanisms may require certain adaptation: (i) traffic analysis under sporadic data transfer, and (ii) service-level agreement (SLA) for partial and intermittently available behaviors.

Additionally, procedures to identify and discover pi-resources may differ from the classical ones: (i) adaptive time-out discovery mechanisms, (ii) hybrid sequential and parallel processing, and (iii) new semantics of high availability.

The management of pi-resources faces additional challenges when considering (i) context-aware resources, (ii) user behavior, (iii) autonomic pi-components, and (iv) management of mobile pi-resources, including accounting fault/alarm processing, performance evaluation, metering, etc.

For SAPIR 2004, submissions covered topics on bandwidth allocation, policy-based operations, service monitoring, intelligent architectural systems, mobility and wireless, protocol aspects, and performances across heterogeneous domains. The authors made a substantial contribution in highlighting particular aspects related to pi-resources, even though sometimes the linkage was not explicit.

We would like to thank the scientific program committee members and the referees. Without their support, the program organization of this workshop would not have been possible. Petre Dini particularly thanks Cisco Systems, Inc. for supporting his activity in organizing this workshop and coming activities under the auspices of IARIA [International Academy, Research, and Industry Association]. In particular, we thank the members of the Organizing Committee who helped co-locating the event with ICT 2004 (International Conference on Telecommunications, LNCS 3124). Special thanks to Rossana Andrade, Roberta Cavalcante, and Ricardo Parissi Accioly. We also thank the USA-based event specialist VICOV, Inc., who graciously offered assistance and advised on a voluntary basis.

We hope this first event sets a new path in considering more active research and prototyping in working with pi-resources. We hope that all attendees enjoyed their participation at SAPIR 2004. We also hope that they enjoyed their visit to Fortaleza with its beautiful countryside and its major cultural attractions.

Petre Dini  
Pascal Lorenz

## **SAPIR 2004 Chair**

Petre Dini, Cisco Systems, Inc., USA, and Concordia University, Canada

## **Technical Program Committee**

Christer Åhlund (Sweden) - Lulea University  
Nikos Anerousis (USA) - IBM T.J. Watson Research Center  
Carlos Becker Westphall (Brazil) - Federal University of Santa Catarina  
Alexander Clemm (USA) - Cisco Systems, Inc.  
Sergiu Dascalu (USA) - University of Nevada  
Petre Dini (USA) - Cisco Systems, Inc., and Concordia University  
Avri Doria (Korea) - ETRI Network Technology Lab  
Olivier Festor (France) - LORIA-INRIA Lorraine  
Mike Fisher (UK) - BT  
Felix Flemisch (Germany) - Siemens AG  
Alex Galis (UK) - University College London  
Germán Goldszmidt (USA) - IBM  
Roch Glitho (Canada) – Ericsson, Canada, and Concordia University, Canada  
Mahamat Guiagoussou (USA) - Sun  
Abdelhakim Hafid (USA) - Telcordia Technologies, Inc.  
Masum Hasan (USA) - Cisco Systems, Inc.  
Mohamed T. Ibrahim (UK) - University of Greenwich  
Mike Myung-Ok Lee (Republic of Korea) - Dongshin University  
Philippe Owezarski (France) - LAAS-CNRS  
Nelly Leligou (Greece) - National Technical University of Athens  
Pascal Lorenz (France) - University of Haute Alsace  
Sheng Ma (USA) - IBM T.J. Watson Research Center  
Said Soulhi (Canada) - Ericsson  
José Neuman De Souza (Brazil) - Federal University of Ceara  
Arkady Zaslavsky (Australia) - Monash University

# Table of Contents

## Bandwidth Allocation

Fair Bandwidth Allocation for the Integration of Adaptive and Non-adaptive Applications .....	1
<i>R.M. Salles and J.A. Barria</i>	
A Managed Bandwidth Reservation Protocol for Ad Hoc Networks .....	13
<i>C. Chaudet, O. Festor, I. Guérin Lassous, and R. State</i>	
Predictive Dynamic Bandwidth Allocation Based on Multifractal Traffic Characteristic .....	21
<i>G.R. Bianchi, F.H. Vieira Teles, and L.L. Ling</i>	
Bandwidth Allocation Management Based on Neural Networks Prediction for VoD System Providers .....	31
<i>D.G. Gomes, N. Agoulmine, and J.N. de Souza</i>	

## Policy-Based Operations

Policy-Based Management of Grids and Networks Through an Hierarchical Architecture .....	42
<i>R. Neisse, E.D.V. Pereira, L.Z. Granville, M.J.B. Almeida, and L.M.R. Tarouco</i>	
Policy-Based Service Provisioning for Mobile Users .....	55
<i>M. Ganna and E. Horlait</i>	
Dynamic IP-Grouping Scheme with Reduced Wireless Signaling Cost in the Mobile Internet .....	67
<i>T. Kim, H. Lee, B. Choi, H. Park, and J. Lee</i>	
3G Wireless Networks Provisioning and Monitoring Via Policy-Based Management .....	79
<i>S. Soulhi</i>	

## Service Monitoring

Combined Performance Analysis of Signal Level-Based Dynamic Channel Allocation and Adaptive Antennas .....	92
<i>Y.C.B. Silva, E.B. Silva, T.F. Maciel, F.R.P. Cavalcanti, and L.S. Cardoso</i>	

Exploring Service Reliability for Content Distribution to Partial or Intermittent DVB-S Satellite Receivers .....	104
<i>H. Mannaert and P. Adriaenssens</i>	

Priority-Based Recovery Assurance for Double-Link Failure in Optical Mesh Networks with Insufficient Spare Resources .....	110
<i>H. Hwang</i>	

Service Model and Its Application to Impact Analysis .....	116
<i>R. Lau and R. Khare</i>	

## Intelligent Architectural Systems

Active Networks and Computational Intelligence .....	128
<i>M. Jalili-Kharaajoo and B. Moshiri</i>	

Distributed Artificial Intelligence for Network Management Systems — New Approaches .....	135
<i>F. Koch, C.B. Westphall, M.D. de Assuncao, and E. Xavier</i>	

Network Traffic Sensor for Multiprocessor Architectures: Design Improvement Proposals .....	146
<i>A. Ferro, F. Liberal, A. Muñoz, and C. Perfecto</i>	

Software Modeling for Open Distributed Network Monitoring Systems ...	158
<i>J.W. Kallman, P. Minnaie, J. Truppi, S.M. Dascalu, and F.C. Harris Jr.</i>	

## Mobility and Wireless

Analysis and Contrast Between STC and Spatial Diversity Techniques for OFDM WLAN with Channel Estimation.....	170
<i>E.R. de Lima, S.J. Flores, V. Almenar, and M.J. Canet</i>	

Cumulative Caching for Reduced User-Perceived Latency for WWW Transfers on Networks with Satellite Links .....	179
<i>A. Bhalekar and J. Baras</i>	

Mobility Agent Advertisement Mechanism for Supporting Mobile IP in Ad Hoc Networks .....	187
<i>H.-G. Seo and K.-H. Kim</i>	

Agent Selection Strategies in Wireless Networks with Multihomed Mobile IP .....	197
<i>C. Åhlund, R. Brännström, and A. Zaslavsky</i>	

## Protocol Mechanisms

An On-Demand QoS Routing Protocol for Mobile Ad-Hoc Networks.....	207
<i>M. Liu, Z. Li, J. Shi, E. Dutkiewicz, and R. Raad</i>	

Point-to-Point Blocking in 3-Stage Switching Networks with Multicast Traffic Streams .....	219
<i>S. Hanczewski and M. Stasiak</i>	
Considerations on Inter-domain QoS and Traffic Engineering Issues Through a Utopian Approach .....	231
<i>P. Levis, A. Asgari, and P. Trimintzios</i>	
Probabilistic Routing in Intermittently Connected Networks .....	239
<i>A. Lindgren, A. Doria, and O. Schelén</i>	
<b>Performance Across Domains</b>	
Communication Protocol for Interdomain Resource Reservation .....	255
<i>M.-M. Tromparent</i>	
Performance Evaluation of Shortest Path Computation for IP and MPLS Multi-service Networks over Open Source Implementation .....	267
<i>H. Abdalla Jr., A.M. Soares, P.H.P. de Cavalho, G. Amvame-Nze, P. Solís Barreto, R. Lambert, E. Pastor, I. Amaral, V. Macedo, and P. Tarchetti</i>	
Design and Evaluation of Redundant IPC Network Adequate for an Edge Router .....	279
<i>Y. Kim, J. Huh, H. Jung, and K.R. Cho</i>	
Leaky Bucket Based Buffer Management Scheme to Support Differentiated Service in Packet-Switched Networks .....	291
<i>K.-W. Kim, S.-T. Lee, D.-I. Kim, and M.M.-O. Lee</i>	
An Improved Service Differentiation Scheme for VBR VoIP in Ad-Hoc Networks Connected to Wired Networks .....	301
<i>M.C. Domingo and D. Remondo</i>	
<b>Author Index</b> .....	311
