

# Message from the General Co-Chairs

## AsiaJCIS 2022

It is our great honor to invite you to the 17th annual Asia Joint Conference on Information Security 2022 (abbreviated as AsiaJCIS 2022) that will be held in the Hebei University in Hebei, China on August 15-16, 2022, as well as virtually due to global COVID-19 pandemic.

The primary goal of AsiaJCIS is to provide an open forum for the publication of novel, practical, high-quality papers that demonstrate the latest research and development results and their applications in the field of information security and cybersecurity. The research focus is on cryptography, privacy, network security, application security, information security management, system security, and new security technologies such as cloud computing systems, edge computing, and smart grids, and a wide range of other topics. In addition, an important mission of AsiaJCIS is to build synergy among the security communities in Asia for the advancement and development of these technologies.

For this year, we have received submissions from several Asian countries. The program committee selected nine regular papers for oral presentation. In addition, we have invited eight speakers from academia as well as industry to introduce their recent on-going cutting-edge works. The accepted papers cover wide ranges of research fields from system security to cryptography, fundamental to applied security including hot topics.

The success of the AsiaJCIS 2022 solely depends on your strong interests and active participation in this conference. The future of the coming AsiaJCIS also depends highly on the everlasting support by you and your colleagues.

The AsiaJCIS 2022 is organized by Hebei University and is sponsored by Hebei Cyberspace Security Society, China. And it is also supported by the IEICE Technical Committee on Information and Communication System Security (ICSS) of Japan, the IEICE Information and Systems Society (ISS) of Japan, the Korea Institute on Information Security and Cryptology of Korea (Republic of) and the Chinese Cryptology and Information Security Association (CCISA) of Taiwan.

We would like to thank the members of the technical program committee and organizing committee, keynote speaker, invited speakers, reviewers, and authors who have contributed to the success of this conference.

Finally, we hope that you will find a lot of valuable information for your next research and development on information security and its applications through participation in this Conference.

Thank you very much and good luck to all of you!

Dingyi Pei, *Guangzhou University, China*

Koji Nakao, *NICT, Japan*

Heung Youl Youm, *Soonchunhyang University, Korea*

Chun-I Fan, *National Sun Yat-sen University, Taiwan*
