

CORRECTION

The following Tables replace Tables I and II of the paper "Symbolic Programming" by N. Rochester of pages 9 and 10. The crossed-out numbers and the corrections shown below are properly part of the figures. With the figures as originally printed, portions of the paper were meaningless.

We regret that this error, which aptly illustrates the hazards of the human link in proofreading, was not caught before the issue was mailed. If you have not yet received your copy of the Transactions, it should arrive shortly.

The Editor.
