

We are proud to present the 2nd ISMAR Doctoral Consortium (DC). We are continuing to build on the success of the 1st DC at ISMAR 2012, where DC students received invaluable inputs from DC mentors to help improve their research. The goal of the DC is to create an opportunity for PhD students to present their research, discuss their current progresses and future plans, and receive constructive criticism and guidances regarding their current work, future work, and career perspectives. This year DC received 13 submissions from 8 countries all over the world. A total of seven (7) doctoral students have been selected to the DC this year. Their research projects cover wide ranges of important areas such as tracking, interaction, and information representation in Augmented Reality. The DC program is scheduled for all day presentation on Tuesday 1st October 2013. All ISMAR 2013 attendees are most welcome to attend, participate, and discuss with the DC students as well as foster the future event of the DC. The poster version of the DC papers will also be shown during the poster session.

Finally, we would like to give a special thank you to our DC mentors/reviewers for their hard work and contribution. Their insightful suggestions and comments are what made the DC program possible.

Doctoral Consortium Chairs

Winyu Chinthammit, HIT Lab AU, University of Tasmania, Australia
Si Jung "Jun" Kim, University of Central Florida, USA
