

Bruno Andò

Dear Readers,

It is a great pleasure for me to introduce you to this very intriguing issue that deals with "Forensic Metrology." Basically, real needs for specific skills occur while performing activities in forensic and criminalistics laboratories, with particular regards to measurements that aim to support legal actions, such as the well-known assessment of blood or breath alcohol content. So, we can surely affirm that Forensic Metrology is assuming a strategic role in legal proceedings, especially if we think about the aim for and the use of outcomes generated by such measurement processes, very often to solve reasonable doubts.

I'm sure this is a unique opportunity to offer our readership interesting readings about this hot and challenging topic, strictly related to the Instrumentation and Measurement framework, and exactly in line with the aim of this *Magazine*. Theoretical aspects, examples and real cases of study will drive us through a well-planned tour of this amazing subject.

I really want to thank the Guest Editor of this issue, Dr. Veronica Scotti, and all of the respected authors included in this *Magazine* for the excellent contributions they are offering to our readership.

Have a nice time reading,

Bruno
