

Bruno Andò

Dear Readers,
This issue of *Instrumentation & Measurement Magazine* focuses on different subjects dealing with theory and applications of measurement science. In particular, we are glad to offer interesting readings related to the topic

“Smart measurement in machine vision for challenging applications.”

Machine Vision is adopted in many application fields, exploiting technologies spanning from automation to robotics, which are strictly related to the instrumentation and measurement framework. The reasons are twofold, since machine vision is used for the realization of instrumentation, while measurement knowledge is mandatory for the development of machine vision-based systems.

We would like to thank three Guest Editors for their assistance with this issue: Dr. C. Venkatesan of HKBK College of Engineering in Bengaluru, India; Dr. Fadi Al-Turjman of Near East University in Nicosia, Turkey; and Dr. Danilo Pelusi of the University of Teramo, Italy.

Enjoy this reading,

Bruno
