

PANEL-6

COMPUTER CHESS

Chairman: Benjamin Mittman, Northwestern University

Panelists: To be chosen from the Chess Tournament
participants

Several authors from the Sixth Annual Computer Chess Championship will discuss their views on the present and future developments in this highly specialized field. David Levy, a chess master from Scotland, will comment on the progress made since he made his world famous wager in 1968 (that no computer would be able to beat him in a match within the next ten years). Breakthroughs in this field will be of considerable interest to artificial intelligence researchers, and also to those involved in the theory of long-range planning.
