DE GRUYTER

MONTE CARLO METHODS AND APPLICATIONS is a quarterly published journal presenting original articles on the theory and applications of Monte Carlo and quasi-Monte Carlo methods. Launched in 1995 the journal covers all stochastic numerics topics with emphasis on the theory of Monte Carlo methods and new applications in all branches of science and technology. The following topics will be covered: theory of Monte Carlo methods, quasi-Monte Carlo methods, integration, boundary value problems for PDE's, numerics of stochastic differential equations, simulation of random variables, stochastic processes and fields, and stochastic models in all fields of applied sciences.

All information regarding notes for contributors, subscriptions, Open access, back volumes and orders is available online at www.degruyter.com/mcma.

Contents

Naho Akiyama, Toshihiro Yamada

A high order weak approximation for jump-diffusions using Malliavin calculus and operator splitting — 97

Jaya P. N. Bishwal

Berry–Esseen inequalities for the fractional Black–Karasinski model of term structure of interest rates — 111

Karl K. Sabelfeld

Randomized Monte Carlo algorithms for matrix iterations and solving large systems of linear equations — 125

Tetiana Ianevych, Iryna Rozora, Anatolii Pashko

On one way of modeling a stochastic process with given accuracy and reliability — 135

Shijia Wang, Tim Swartz

Moment matching adaptive importance sampling with skew-student proposals — 149

Hamida Talhi, Hiba Aiachi, Nadji Rahmania

Bayesian estimation of a competing risk model based on Weibull and exponential distributions under right censored data — 163

Meriem Cherabli, Megdouda Ourbih-Tari,
Meriem Boubalou

Refined descriptive sampling simulated annealing algorithm for solving the traveling salesman problem — 175

Kamal Hiderah

Carathéodory approximate solutions for a class of stochastic differential equations involving the local time at point zero with one-sided Lipschitz continuous drift coefficients — 189
