

# User-Centered Evaluation of Visual Analytics

# Synthesis Lectures on Visualization

David Ebert, *Purdue University*

Niklas Elmqvist, *University of Maryland*

Synthesis Lectures on Visualization publishes 50- to 100-page publications on topics pertaining to scientific visualization, information visualization, and visual analytics. Potential topics include, but are not limited to: scientific, information, and medical visualization; visual analytics, applications of visualization and analysis; mathematical foundations of visualization and analytics; interaction, cognition, and perception related to visualization and analytics; data integration, analysis, and visualization; new applications of visualization and analysis; knowledge discovery management and representation; systems, and evaluation; distributed and collaborative visualization and analysis.

*SYNTHESIS LECTURES ON VISUALIZATION #9*

## ABSTRACT

Visual analytics has come a long way since its inception in 2005. The amount of data in the world today has increased significantly and experts in many domains are struggling to make sense of their data. Visual analytics is helping them conduct their analyses. While software developers have worked for many years to develop software that helps users do their tasks, this task is becoming more and more onerous, as understanding the needs and data used by expert users requires more than some simple usability testing during the development process. The need for a user-centered evaluation process was envisioned in *Illuminating the Path*, the seminal work on visual analytics by James Thomas and Kristin Cook in 2005. We have learned over the intervening years that not only will user-centered evaluation help software developers to turn out products that have more utility, the evaluation efforts can also help point out the direction for future research efforts.

This book describes the efforts that go into analysis, including critical thinking, sensemaking, and various analytics techniques learned from the intelligence community. Support for these components is needed in order to provide the most utility for the expert users. There are a good number of techniques for evaluating software that has been developed within the human-computer interaction (HCI) community. While some of these techniques can be used as is, others require modifications. These too are described in the book. An essential point to stress is that the users of the domains for which visual analytics tools are being designed need to be involved in the process. The work they do and the obstacles in their current processes need to be understood in order to determine both the types of evaluations needed and the metrics to use in these evaluations. At this point in time, very few published efforts describe more than informal evaluations. The purpose of this book is to help readers understand the need for more user-centered evaluations to drive both better-designed products and to define areas for future research. Hopefully readers will view this work as an exciting and creative effort and will join the community involved in these efforts.

## KEYWORDS

visual analytics, user-centered evaluations, sensemaking, analytic techniques, human-computer interaction, metrics

# Contents

	<b>Acknowledgments</b> .....	<b>.xi</b>
<b>1</b>	<b>Introduction</b> .....	<b>1</b>
<b>2</b>	<b>Analysis</b> .....	<b>3</b>
2.1	History of Intelligence Analysis in the United States .....	3
2.2	Changes in Intelligence Analysis .....	4
2.3	Sherman Kent and the Discipline of Intelligence Analysis .....	4
2.4	Critical Thinking .....	4
<b>3</b>	<b>Analytic Methods</b> .....	<b>7</b>
3.1	Sensemaking .....	7
<b>4</b>	<b>What is Visual Analytics and Why is it Needed?</b> .....	<b>11</b>
4.1	Examples of Visual Analytics Tools .....	12
<b>5</b>	<b>User-Centered Evaluation</b> .....	<b>17</b>
5.1	Typical HCI Evaluation Methods .....	20
5.1.1	Guidelines .....	21
5.1.2	Heuristics .....	22
5.1.3	Usability Evaluations .....	24
5.1.4	A/B Studies .....	25
5.1.5	Field Studies .....	25
<b>6</b>	<b>Evaluation Needs for Visual Analytics</b> .....	<b>27</b>
6.1	Modifying Traditional HCI Evaluation Techniques for Visual Analytics ...	29
6.2	New Components .....	29
6.2.1	Techniques: Data Encoding and Interactions .....	29
6.2.2	Algorithms .....	30
6.2.3	Sensemaking .....	31
6.3	Modifications to HCI Evaluation Techniques .....	32
6.3.1	Guidelines .....	32
6.3.2	Heuristics for Visual Analytics .....	36
6.3.3	Usability Studies .....	38
6.3.4	A/B Studies .....	39

6.3.5	Field Studies	39
6.4	Using the Nested Blocks Model for Evaluation Tracking	40
6.5	Metrics	41
6.6	Metrics for Visual Analytics	41
6.6.1	An Infrastructure to Support Evaluation Needs: The VAST Challenge	44
<b>7</b>	<b>Current Examples of Evaluation of Visual Analytics Systems.</b>	<b>47</b>
7.1	Evaluation in Research Communities	47
7.2	Integrating Evaluation in Real-World Applications	48
<b>8</b>	<b>Trends in Visual Analytics Research and Development.</b>	<b>51</b>

# Acknowledgments

I appreciate the support of my colleagues at the Pacific Northwest National Laboratory who have not only helped with this work but also have supported user-centered design and evaluation work on a wide variety of projects. A special thank you to Niklas Elmquist for encouraging me to produce a work specifically addressing the evaluation of visual analyst systems from the user's point of view.
