

Virtual Material Acquisition and Representation for Computer Graphics

Synthesis Lectures on Visual Computing

Editor

Brian Barsky, *University of California, Berkeley*

This series presents lectures on research and development in visual computing for an audience of professional developers, researchers, and advanced students. Topics of interest include computational photography, animation, visualization, special effects, game design, image techniques, computational geometry, modeling, rendering, and others of interest to the visual computing system developer or researcher.

Virtual Material Acquisition and Representation for Computer Graphics

Dar'ya Guarnera and Giuseppe Claudio Guarnera
2017

Stochastic Partial Differential Equations for Computer Vision with Uncertain Data

Tobias Preusser, Robert M. Kirby, and Torben Pätz
2017

An Introduction to Laplacian Spectral Distances and Kernels: Theory, Computation, and Applications

Giuseppe Patanè
2017

Mathematical Basics of Motion and Deformation in Computer Graphics, Second Edition

Ken Anjyo and Hiroyuki Ochiai
2017

Digital Heritage Reconstruction Using Super-resolution and Inpainting

Milind G. Padalkar, Manjunath V. Joshi, and Nilay L. Khatri
2016

Geometric Continuity of Curves and Surfaces

Przemysław Kiciak
2016

Heterogeneous Spatial Data: Fusion, Modeling, and Analysis for GIS Applications

Giuseppe Patanè and Michela Spagnuolo
2016

Geometric and Discrete Path Planning for Interactive Virtual Worlds

Marcelo Kallmann and Mubbasir Kapadia

2016

An Introduction to Verification of Visualization Techniques

Tiago Etienne, Robert M. Kirby, and Cláudio T. Silva

2015

Virtual Crowds: Steps Toward Behavioral Realism

Mubbasir Kapadia, Nuria Pelechano, Jan Allbeck, and Norm Badler

2015

Finite Element Method Simulation of 3D Deformable Solids

Eftychios Sifakis and Jernej Barbic

2015

Efficient Quadrature Rules for Illumination Integrals: From Quasi Monte Carlo to Bayesian Monte Carlo

Ricardo Marques, Christian Bouville, Luís Paulo Santos, and Kadi Bouatouch

2015

Numerical Methods for Linear Complementarity Problems in Physics-Based Animation

Sarah Niebe and Kenny Erleben

2015

Mathematical Basics of Motion and Deformation in Computer Graphics

Ken Anjyo and Hiroyuki Ochiai

2014

Mathematical Tools for Shape Analysis and Description

Silvia Biasotti, Bianca Falcidieno, Daniela Giorgi, and Michela Spagnuolo

2014

Information Theory Tools for Image Processing

Miquel Feixas, Anton Bardera, Jaume Rigau, Qing Xu, and Mateu Sbert

2014

Gazing at Games: An Introduction to Eye Tracking Control

Veronica Sundstedt

2012

Rethinking Quaternions

Ron Goldman

2010

Information Theory Tools for Computer Graphics

Mateu Sbert, Miquel Feixas, Jaume Rigau, Miguel Chover, and Ivan Viola
2009

Introductory Tiling Theory for Computer Graphics

Craig S. Kaplan
2009

Practical Global Illumination with Irradiance Caching

Jaroslav Krivanek and Pascal Gautron
2009

Wang Tiles in Computer Graphics

Ares Lagae
2009

Virtual Crowds: Methods, Simulation, and Control

Nuria Pelechano, Jan M. Allbeck, and Norman I. Badler
2008

Interactive Shape Design

Marie-Paule Cani, Takeo Igarashi, and Geoff Wyvill
2008

Real-Time Massive Model Rendering

Sung-eui Yoon, Enrico Gobbetti, David Kasik, and Dinesh Manocha
2008

High Dynamic Range Video

Karol Myszkowski, Rafal Mantiuk, and Grzegorz Krawczyk
2008

GPU-Based Techniques for Global Illumination Effects

László Szirmay-Kalos, László Szécsi, and Mateu Sbert
2008

High Dynamic Range Image Reconstruction

Asla M. Sá, Paulo Cezar Carvalho, and Luiz Velho
2008

High Fidelity Haptic Rendering

Miguel A. Otaduy and Ming C. Lin
2006

A Blossoming Development of Splines

Stephen Mann
2006

Dar'ya Guarnera and Giuseppe Claudio Guarnera
Norwegian University of Science and Technology

SYNTHESIS LECTURES ON VISUAL COMPUTING #30

ABSTRACT

This book provides beginners in computer graphics and related fields a guide to the concepts, models, and technologies for realistic rendering of material appearance. It provides a complete and thorough overview of reflectance models and acquisition setups, along with providing a selection of the available tools to explore, visualize, and render the reflectance data. Reflectance models are under continuous development, since there is still no straightforward solution for general material representations. Every reflectance model is specific to a class of materials. Hence, each has strengths and weaknesses, which the book highlights in order to help the reader choose the most suitable model for any purpose. The overview of the acquisition setups will provide guidance to a reader who needs to acquire virtual materials and will help them to understand which measurement setup can be useful for a particular purpose, while taking into account the performance and the expected cost derived from the required components. The book also describes several recent open source software solutions, useful for visualizing and manipulating a wide variety of reflectance models and data.

KEYWORDS

virtual materials, reflectance models, reflectance acquisition, BRDF

Contents

	Preface	xi
	Acknowledgments	xiii
1	Introduction	1
1.1	Challenges	2
1.2	Scope of the Book	3
2	Reflectance Functions	5
2.1	Definition of the BRDF	8
2.2	Basic BRDF Models	11
3	Models of BRDF	15
3.1	Phenomenological Models	21
3.1.1	Phenomenological Models for Isotropic Materials	21
3.1.2	Phenomenological Models for Anisotropic Materials	23
3.2	Physically Based Models	29
3.2.1	Physically Based Models for Isotropic Materials	29
3.2.2	Physically Based Models for Anisotropic Materials	37
3.3	Data-Driven Models	38
3.3.1	Data-Driven Models for Isotropic Materials	39
3.3.2	Data-Driven Models for Anisotropic Materials	41
3.4	Available Resources for BRDF Data Fitting and Visualisation	45
4	Acquisition Setups	49
4.1	Gonioreflectometers	51
4.2	Image-Based Measurement	52
4.3	Catadioptric Measurement Setups	55
4.4	Spherical and Hemispherical Gantry	57
4.5	LCD Light Source	64
4.6	Flash Illumination and Other Capture Setups	65

5	Conclusion	69
	5.1 Conclusion	69
	Bibliography	71
	Authors' Biographies	87

Preface

The quest for photorealism drives research toward new developments in Computer Graphics and related fields, with the aim of finally conquering the uncanny valley and making the virtual world indistinguishable from the real one. Achieving a photorealistic virtual representation of the real-world involves several factors, among which is a faithful reproduction of material appearance. Human perception of the appearance of an object depends on the way its surface reflects the incident light, since the reflection provides important visual cues about material properties, such as glossiness and color, used to identify the type of material (plastic, metal, rubber, ceramic, fabric, etc.) and additional information, for instance dry/wet or smooth/rough textures. Visual properties are related to physical characteristics like the diffuse and specular albedo, the index of refraction of the material (as well as that of the physical media in which it is placed, such as air or water), its surface roughness, and so on. The interaction between an opaque, homogeneous surface and the lighting incident on it can be described by the radiometric Bidirectional Reflection Distribution Function (BRDF). A huge body of computer graphics research has been carried out in order to derive compact and accurate models for BRDFs.

Selecting a suitable reflectance model to render a virtual material is not a straightforward task, since each reflectance model often aims to represent specific (subsets of) properties, with the result that a given model can describe plastic very well but not metals, and so on. Not all the BRDF models have become widespread in software packages, and the most common ones can be implemented differently in different renderers, leading to a slightly different rendered image. Hence, in this book we will focus on the theory rather than in the implementation. The reader will find accurate information about BRDF models, their taxonomy and characteristics, and the setup used to acquire the BRDF data, which range from low-to-high cost and low-to-high accuracy.

Dar'ya Guarnera and Giuseppe Claudio Guarnera

Acknowledgments

This book is the product of several years of research on Virtual Material Appearance in Computer Graphics, ranging from BRDF acquisition to representation.

We would like to acknowledge people who contributed to our research. First, we would like to express our gratitude to Dr. Mashhuda Glencross, who encouraged and supported us. We are grateful to Dr. Abhijeet Ghosh for the valuable suggestions on current BRDF models and acquisition setups.

A heartfelt thank you to our parents, Alfio, Maria, Alexandr, and Nelli, and our sister Rosalinda and brother Sergey for their love, support, and encouragement. Last but not least a special thanks goes to Anastasiya and Ashanti for all the “input” in the development of this book.
