

Ending Medicine's Chronic Dysfunction: Tools and Standards for Medical Decision Making

Synthesis Lectures on Assistive, Rehabilitative, and Health-Preserving Technologies

Editors

Ronald M. Baecker, *University of Toronto*

Andrew Sixsmith, *Simon Fraser University and AGE-WELL NCE*

This series provides state-of-the-art overview lectures on assistive technologies. We take a broad view of this expanding field, defining it as information and communications technologies used in diagnosis and treatment, prosthetics that compensate for impaired capabilities, methods for rehabilitating or restoring function, and protective interventions that enable individuals to stay healthy for longer periods of time.

Each overview introduces the medical context in which technology is used, presents and explains the technology; reviews problems and opportunities, successes and failures in the development and use of technology; and synthesizes promising opportunities for future progress. Authors include significant material based on their own work, while surveying the broad landscape of an area's research, development, and deployment progress and success.

Ending Medicine's Chronic Dysfunction: Tools and Standards for Medical Decision Making

Lawrence L. Weed (1923–2017) and Lincoln Weed

Research Advances in ADHD and Technology

Franceli L. Cibrian, Gillian R. Hayes, and Kimberley D. Lakes

AgeTech, Cognitive Health, and Dementia

Andrew Sixsmith, Judith Sixsmith, Mei Lan Fang, and Becky Horst

Interactive Technologies and Autism, Second Edition

Julie A. Kientz, Gillian R. Hayes, Matthew S. Goodwin, Mirko Gelsomini, and Gregory D. Abowd

Zero-Effort Technologies: Considerations, Challenges, and Use in Health, Wellness, and Rehabilitation, Second Edition

Jennifer Boger, Victoria Young, Jesse Hoey, Tizneem Jiancaro, and Alex Mihailidis

Human Factors in Healthcare: A Field Guide to Continuous Improvement

Avi Parush, Debi Parush, and Roy Ilan

Assistive Technology Design for Intelligence Augmentation

Stefan Carmien

Body Tracking in Healthcare

Kenton O'Hara, Cecily Morrison, Abigail Sellen, Nadia Bianchi-Berthouze, and Cathy Craig

Clear Speech: Technologies that Enable the Expression and Reception of Language

Frank Rudzicz

Designed Technologies for Healthy Aging

Claudia B. Rebola

Fieldwork for Healthcare: Guidance for Investigating Human Factors in Computing Systems

Dominic Furniss, Rebecca Randell, Aisling Ann O'Kane, Svetlena Taneva, Helena Mentis, and Ann Blandford

Fieldwork for Healthcare: Case Studies Investigating Human Factors in Computing Systems

Dominic Furniss, Aisling Ann O'Kane, Rebecca Randell, Svetlena Taneva, Helena Mentis, and Ann Blandford

Interactive Technologies for Autism

Julie A. Kientz, Matthew S. Goodwin, Gillian R. Hayes, and Gregory D. Abowd

Patient-Centered Design of Cognitive Assistive Technology for Traumatic Brain Injury Telerehabilitation

Elliot Cole

Zero Effort Technologies: Considerations, Challenges, and Use in Health, Wellness, and Rehabilitation

Alex Mihailidis, Jennifer Boger, Jesse Hoey, and Tizneem Jancaro

Design and the Digital Divide: Insights from 40 Years in Computer Support for Older and Disabled People

Alan F. Newell

SYNTHESIS LECTURES ON ASSISTIVE, REHABILITATIVE, AND HEALTH-PRESERVING TECHNOLOGIES #16

ABSTRACT

This book describes an overlooked solution to a long-standing problem in health care. The problem is an informational supply chain that is unnecessarily dependent on the minds of doctors for assembling patient data and medical knowledge in clinical decision making. That supply chain function is more than the human mind can deliver. Yet, dependence on the mind is built into the traditional role of doctors, who are educated and licensed to rely heavily on personal knowledge and judgment. The culture of medicine has long been in denial of this problem, even now that health information technology is increasingly used, and even as artificial intelligence (AI) tools are emerging. AI will play an important role, but it is not a solution. The solution instead begins with traditional software techniques designed to integrate novel functionality for clinical decision support and electronic health record (EHR) tools. That functionality implements high standards of care for managing health information. This book describes that functionality in some detail. This description is intended in part to be a starting point for developers in the open source software community, who have an opportunity to begin developing an integrated, cloud-based version of the tools described, working with interested clinicians, patients, and others. The tools grew out of work beginning more than six decades ago, when this book's lead author (deceased) originated problem lists and structured notes in medical records. The electronic tools he later developed led him to reconceive education and licensure for doctors and other health professionals, which are also part of the solution this book describes.

KEYWORDS

problem-oriented, electronic health records, clinical decision support systems, artificial intelligence, clinician role, licensure

Contents

1	Introduction	1
1.1	What Is This Book About?	1
1.1.1	The Case of the Crazy Surgeon and the Wise Physical Therapist	3
1.1.2	How This Case Exemplifies the Subject Matter of This Book	5
1.1.3	A New Division of Labor	8
1.2	Who Is the Audience?	10
1.3	Who Are the Authors?	11
1.4	Basic Concepts and Terminology Used in This Book	12
	PART I: THE PROBLEM	15
2	Nature of the Problem	17
2.1	Root Cause of the Problem	17
2.2	Denial of the Problem	20
3	Examples of the Problem	27
3.1	Diagnostic Odysseys	27
3.1.1	Twelve Years of Misery	28
3.1.2	Tunnel Vision by Ten Doctors in Five Specialties	31
3.1.3	Random Roads to the Same Diagnosis	34
3.1.3.1	Missing a Girl's "Obvious" Diagnosis Until She "Almost Died"	34
3.1.3.2	"These Days She was Queasy All the Time. ... She Always Felt Tired."	37
3.1.4	"I Dread Every Annual Mammogram"—Overdiagnosis and Related Harms	38
3.2	Missed and Misguided Treatments	40
3.2.1	Toxic Opioid Treatment	40
3.2.2	Her Parents Finally Believed Her, but Her Doctors Did Not	43
3.3	Misguided Reliance on Alternatives to the Human Mind	44
3.3.1	Practice Guidelines and Clinical Decision Support Tools	44
3.3.2	Internet Search Engines	46

3.3.3	The Wisdom of Crowds? Misguided Tools for Crowdsourcing and Collective Intelligence	47
3.3.4	Artificial Intelligence	51
3.3.4.1	Distinction Between Traditional Software and Advanced Artificial Intelligence	52
3.3.4.2	AI and the Informational Supply Chain in Medicine	53
3.3.4.3	Evolving Experiences with AI in Medicine in Comparison with Traditional Software	55
3.3.4.4	Advanced AI and Machine Learning	59
3.4	Dysfunctional Medical Record Systems	64
3.4.1	Lack of Recordkeeping Standards for Managing Complexity	64
3.4.2	Two Examples of Why Better EHRs Are Essential as Tools for Process Guidance and Communication	66
3.4.2.1	An Infant's Death from Cancer	66
3.4.2.2	A Father's Near-Death from Sepsis	67
3.4.3	The "Scattered Model" of Fragmented Records	69
3.4.4	Clinician Disillusionment	69
3.5	Medical Knowledge as Compromised by the Human Mind	71
4	Magnitude of the Problem	73
4.1	Quality Failures—Medicine's Chronic Condition	73
4.2	Economics of the Problem: The High Costs of Low Quality	77
5	Background: Larry Weed	83
6	Background: Medicine and the Domains of Science and Commerce	85
6.1	The Domain of Science: Francis Bacon and Karl Popper	85
6.2	The Domain of Commerce: Economy of Knowledge	90
	PART II: THE SOLUTION	93
7	A Problem-Oriented System of Health and Health Care	95
7.1	Defining Inputs with Guidance Tools	96
7.2	The Meaning of Problem-Orientation	98
8	Informational Guidance: Clinical Decision Support Tools and Standards of Care for Coupling Patient Data with Medical Knowledge	103
8.1	The Two Stages of Decision Making	103
8.2	Alternative Approaches to the First Stage	106
8.2.1	The Judgmental Approach	106

8.2.2	The Combinatorial Approach	108
8.3	Core Operations of Tools Implementing the Combinatorial Approach ...	114
8.3.1	Overview	114
8.3.2	Process for Building CDS Tools to Implement a Combinatorial Approach	117
8.3.3	The Seven-Step Sequence in Detail	118
8.3.3.1	Step 1. Link the Initial Data Point (the Patient's Problem) with Applicable Knowledge	119
8.3.3.2	Step 2. Define Each Option as a Set of Simple Findings from Readily Available Sources	121
8.3.3.3	Step 3. Combine All Finding Sets for All Options from Step 2 and Generate a List of Findings to Be Made	123
8.3.3.4	Step 4. Make the Findings and Record Them as Positive, Negative, or Uncertain	124
8.3.3.5	Step 5. Match All Recorded Findings from Step 4 with All Finding Sets from Step 2	124
8.3.3.6	Step 6. Generate Initial Output—A List of Options, Categorized and Ranked	125
8.3.3.7	Step 7. Generate Detailed Further Output on Each Option	127
8.3.3.8	Further Examining the Cough Diagnosis/COVID-19 Example	129
8.3.3.9	Another Case of Cough Diagnosis—Curing the Problem over a Glass of Wine	130
8.4	VisualDx: A CDS Tool Optimized for Visual Information	130
9	Process Guidance: The Problem-Oriented Record	137
9.1	Problem-Oriented Design for Medical Records	137
9.1.1	Completeness	138
9.1.2	Structure and Data Categories	139
9.1.2.1	Top-Level Structure	139
9.1.2.2	Data Categories	141
9.1.3	Verifiability	146
9.1.3.1	Scientific Integrity	146
9.1.3.2	Example: Cough Diagnosis	148
9.1.3.3	Example: Opioid Treatment	150

9.1.4	“Understandable Perhaps, But It Almost Killed Him”: A Further Example	150
9.2	Moving from the “Scattered Model” to a Consolidated Record in the Cloud	153
9.3	AkēLex: A Platform for Integrated CDS and Problem-Oriented Record Tools	156
10	World 3 Medicine: Revisiting the Doctor’s Role	161
10.1	Medical Training and the Division of Labor	161
10.2	Professional Autonomy	167
11	Conclusion	173
	Acknowledgments	175
	Authors’ Biographies	177
