

# Special Issue on Reconfigurable Intelligent Surface for B5G & 6G

Zhengyu Zhu, Cunhua Pan, Qingqing Wu, Marco Di Renzo, A. Lee Swindlehurst, and Yajun Zhao

Reconfigurable intelligent surface (RIS) or intelligent reflecting surface (IRS) is recently recognized as one of the most promising technologies to effectively increase coverage and improve communication performance for future wireless communications beyond 5G and 6G (B5G & 6G). Specifically, the RIS is a planar surface consisting of an array of passive reflecting elements, each of which can independently induce a controllable reflection coefficient on the incident signal. By installing an RIS on the facade of buildings, an additional virtual line of sight (LoS) link can be established between the base station (BS) and the user. By judiciously adjusting the phase shifts of the reflecting elements, the reflected signal can be constructively superimposed with the signal from the direct path to enhance the desired signal power or destructively mitigate unfavourable signals such as multi-user interference or signal leakage to eavesdroppers. The RIS is less expensive to deploy than conventional active transmitters since its reflecting elements only passively reflect the incoming signal without any signal processing operations and does not require costly and power-hungry radio frequency (RF) chains. Moreover, it is lightweight and has limited layer thickness, so it can be easily integrated into the environment. Despite the above-mentioned appealing advantages of RIS, it also brings some new signal processing challenges such as channel estimation, robust transmission design, angle/position estimation, distributed algorithm design, etc.

This special issue of JCN presents three high quality research articles related to the area of Reconfigurable Intelligent Surface for B5G & 6G. In the following we want to introduce the three papers included in this Special Section.

The first paper “*Energy Minimization for UAV Communication Systems Assisted With Multiple IRSs*”, coauthored by Hyesang Cho and Junil Choi, several techniques to minimize the UAV energy consumption in a general multiple IRS multiple UE scenario are proposed. A tight bound for the ergodic achievable rate with multiple IRSs is derived, which was used to generate tractable optimization problem. Also, a low complexity algorithm that mimics the behavior of the IRS matching case is proposed, e. g. The second paper “*Secure Wireless Communications in The Multi-user MISO Interference Channel Assisted by Multiple Reconfigurable Intelligent Surfaces*”, coauthored by Ya Liu *et. al*, an alternating optimization approach is employed to address the non-convexity the minimum secrecy rate maximization problem. The convergence of the proposed iterative optimization algorithm is proved. The third paper “*Generalized Superimposed Training for RIS-aided Cell-free Massive MIMO-OFDM Networks*”, coauthored by Hanxiao Ge *et. al*, a generalized superimposed training is proposed for an uplink cell-free multiple-input multiple-output orthogonal frequency-division multiplexing system, which is aided by reconfigurable intelligent surfaces to enhance the spectral efficiency in the system.

The Guest Editors want to express their thanks to all authors who submitted manuscripts to this Special Section, as well as all the reviewers for their competent and timely reviews. Our thank goes to the Journal of Communications Networks for the opportunity to establish this Special Section and to Eunhye Kim for her support and guidance during the whole editorial process.

**Zhengyu Zhu** (Senior Member, IEEE) received the Ph.D. degree in information engineering from Zhengzhou University, Zhengzhou, China, in 2017. From October 2013 to October 2015, he visited the Communication and Intelligent System Laboratory, Korea University, Seoul, South Korea, to conduct a collaborative research as a Visiting Student. He is currently an associate professor with Zhengzhou University. He served as an Associate Editor for the JOURNAL OF COMMUNICATIONS AND NETWORKS, the WIRELESS COMMUNICATIONS AND MOBILE COMPUTING, and the PHYSICAL COMMUNICATIONS from 2021. His research interests include information theory and signal processing for wireless communications such as B5G/6G, Intelligent reflecting surface, the Internet of Things, machine learning, millimeter wave communication, UAV communication, physical layer security, convex optimization techniques, and energy harvesting communication systems.

**Cunhua Pan** (Member, IEEE) received the B.S. and Ph.D. degrees from the School of Information Science and Engineering, Southeast University, Nanjing, China, in 2010 and 2015, respectively. From 2015 to 2016, he was a Research Associate at the University of Kent, U.K. He held a post-doctoral position at Queen Mary University of London, U.K., from 2016 and 2019. From 2019 to 2021, he was a Lecturer in the same university. From 2021, he is a full professor in Southeast University. His research interests mainly include reconfigurable intelligent surfaces (RIS), intelligent reflection surface (IRS), ultrareliable low latency communication (URLLC), machine learning, UAV, Internet of Things, and mobile edge computing. He has published over 120 IEEE journal papers. He is currently an Editor of IEEE Transactions on Vehicular Technology, IEEE Wireless Communication Letters, IEEE Communications Letters and IEEE ACCESS. He serves as the guest editor for IEEE Journal on Selected Areas in Communications on the special issue on xURLLC in 6G: Next Generation Ultra-Reliable and Low-Latency Communications. He also serves as a leading guest editor of IEEE Journal of Selected Topics in Signal Processing (JSTSP) Special Issue on Advanced Signal Processing for Reconfigurable Intelligent Surface-aided 6G Networks, leading guest editor of IEEE Vehicular Technology Magazine on the special issue on Backscatter and Reconfigurable Intelligent Surface Empowered Wireless Communications in 6G, leading guest editor of IEEE Open Journal of Vehicular Technology on the special issue of Reconfigurable Intelligent Surface Empowered Wireless Communications in 6G and Beyond, and leading guest editor of IEEE ACCESS Special Issue on Reconfigurable Intelligent Surface Aided Communications for 6G and Beyond. He is Workshop organizer in IEEE ICCC 2021 on the topic of Reconfigurable Intelligent Surfaces for

Next Generation Wireless Communications (RIS for 6G Networks), and workshop organizer in IEEE Globecom 2021 on the topic of Reconfigurable Intelligent Surfaces for future wireless communications. He is currently the Workshops and Symposia officer for Reconfigurable Intelligent Surfaces Emerging Technology Initiative. He is workshop chair for IEEE WCNC 2024, and TPC co-chair for IEEE ICCT 2022. He serves as a TPC member for numerous conferences, such as ICC and GLOBECOM, and the Student Travel Grant Chair for ICC 2019. He received the IEEE ComSoc Leonard G. Abraham Prize in 2022, IEEE ComSoc AsiaPacific Outstanding Young Researcher Award, 2022.

**Qingqing Wu** (S'13-M'16-SM'21) received the B.Eng. and the Ph.D. degrees in Electronic Engineering from South China University of Technology and Shanghai Jiao Tong University (SJTU) in 2012 and 2016, respectively. He is currently an assistant professor with the State key laboratory of Internet of Things for Smart City, University of Macau. From 2016 to 2020, he was a Research Fellow in the Department of Electrical and Computer Engineering at National University of Singapore. His current research interest includes intelligent reflecting surface (IRS), unmanned aerial vehicle (UAV) communications, and MIMO transceiver design. He has coauthored more than 100 IEEE journal papers with 25 ESI highly cited papers and 8 ESI hot papers, which have received more than 13,000 Google citations. He was listed as the Clarivate ESI Highly Cited Researcher in 2021, the Most Influential Scholar Award in AI-2000 by Aminer in 2021 and Worlds Top 2% Scientist by Stanford University in 2020 and 2021. He was the recipient of the IEEE Communications Society Young Author Best Paper Award in 2021, the Outstanding Ph.D. Thesis Award of China Institute of Communications in 2017, the Outstanding Ph.D. Thesis Funding in SJTU in 2016, the IEEE ICCC Best Paper Award in 2021, and IEEE WCSP Best Paper Award in 2015. He was the Exemplary Editor of IEEE Communications Letters in 2019 and the Exemplary Reviewer of several IEEE journals. He serves as an Associate Editor for IEEE Transactions on Communications, IEEE Communications Letters, IEEE Wireless Communications Letters, IEEE Open Journal of Communications Society (OJ-COMS), and IEEE Open Journal of Vehicular Technology (OJVT). He is the Lead Guest Editor for IEEE Journal on Selected Areas in Communications on "UAV Communications in 5G and Beyond Networks", and the Guest Editor for IEEE OJVT on "6G Intelligent Communications" and IEEE OJ-COMS on "Reconfigurable Intelligent Surface Based Communications for 6G Wireless Networks". He is the workshop co-chair for IEEE ICC 2019-2022 workshop on Integrating UAVs into 5G and Beyond, and the workshop co-chair for IEEE GLOBECOM 2020 and ICC 2021 workshop on Reconfigurable Intelligent Surfaces for Wireless Communication for Beyond 5G. He serves as the Workshops and Symposia Officer of Reconfigurable Intelligent Surfaces Emerging Technology Initiative and Research Blog Officer of Aerial Communications Emerging Technology Initiative. He is the IEEE Communications Society Young Professional Chair in Asia Pacific Region.

**Marco Di Renzo** (Fellow, IEEE) received the Laurea (cum laude) and Ph.D. degrees in electrical engineering from the University of L'Aquila, Italy, in 2003 and 2007, respectively, and the Habilitation a` Diriger des Recherches (Doctor of Science) degree from University Paris-Sud (now Paris-Saclay University), France, in 2013. Currently, he is a CNRS Research Director (Professor) with the Laboratory of Signals and Systems (L2S) of Paris-Saclay University – CNRS and CentraleSupélec, Paris, France. He serves as the Coordinator of the Communications and Networks Research Area of the Laboratory of Excellence DigiCosme at Paris-Saclay University, as a Member of the Admission and Evaluation Committee of the Ph.D. School on Information and Communication Technologies at Paris-Saclay University, and as the Head of the Intelligent Physical Communications group with the Laboratory of Signals and Systems at CentraleSupélec. He serves as the Editor-in-Chief of IEEE Communications Letters. He is a founding member and a Vice Chair of the Industry Specification Group (ISG) on Reconfigurable Intelligent Surfaces (RIS) within the European Telecommunications Standards Institute (ETSI), where he serves as the Rapporteur for the work item on communication models, channel models, and evaluation methodologies. He is a Fellow of the IEEE, IET, and AAIA; an Ordinary Member of the European Academy of Sciences and Arts, and the Academia Europaea; and a Highly Cited Researcher. Also, he is a Fulbright Fellow, and was a Nokia Foundation Visiting Professor and a Royal Academy of Engineering Distinguished Visiting Fellow. His recent research awards include the 2021 EURASIP Best Paper Award, the 2022 IEEE COMSOC Outstanding Paper Award, and the 2022 Michel Monpetit Prize from the French Academy of Sciences.

**A. Lee Swindlehurst** (Fellow, IEEE) received the B.S. degree in electrical engineering from Brigham Young University (BYU) Provo, UT, USA, in 1985, the M.S. degree in electrical engineering from BYU, in 1986, and the Ph.D. degree in electrical engineering from Stanford University, Stanford, CA, USA, in 1991. He was with the Department of Electrical and Computer Engineering, BYU, from 1990 to 2007. From 1996 to 1997, he held a joint appointment as a Visiting Scholar at Uppsala University, Uppsala, Sweden, and the Royal Institute of Technology, Stockholm, Sweden. From 2006 to 2007, he was on leave working as the Vice President of Research at ArrayComm LLC, San Jose, CA, USA. Since 2007, he has been a Professor with the Department of Electrical Engineering and Computer Science, University of California at Irvine, Irvine, CA, USA. From 2014 to 2017, he was a Hans Fischer Senior Fellow with the Institute for Advanced Studies, Technical University of Munich, Munich, Germany. His research focuses on array signal processing for radar, wireless communications, and biomedical applications, and he has over 375 publications in these areas. Dr. Swindlehurst was elected as a Foreign Member of the Royal Swedish Academy of Engineering Sciences (IVA) in 2016. He was the inaugural Editor-in-Chief of the IEEE JOURNAL OF SELECTED TOPICS IN SIGNAL PROCESSING. He received the 2000 IEEE W. R. G. Baker Prize Paper Award,

the 2006 IEEE Communications Society Stephen O. Rice Prize in the Field of Communication Theory, the 2006, 2010, and 2022 IEEE Signal Processing Society's Best Paper Awards, the 2017 IEEE Signal Processing Society Donald G. Fink Overview Paper Award, and the Best Paper Award at the 2020 IEEE International Conference on Communications.

**YAJUN ZHAO** (Member, IEEE) received the B.E. and master's degrees. Since 2010, he has been acting as a Radio Expert at the Wireless Advanced Research Department, ZTE Corporation. Prior to this, he worked for Huawei on wireless technology research at the Wireless Research Department. Currently, he is mainly engaged in research on 5G standardization technology and future mobile communication technology (6G). His research interests include reconfigurable intelligent surface (RIS), spectrum sharing, flexible duplex, CoMP, and interference mitigation.
